ANALYSIS

This rush generated **54,152** successful hits in **60 seconds** and we transferred **533.41 MB** of data in and out of your app. The average hit rate of **903/second** translates to about **77,978,880** hits/day.

The average response time was 77 ms.

You've got bigger problems, though: **0.05%** of the users during this **rush** experienced timeouts or errors!

RESPONSE TIMES	TEST CONFIGURATION	OTHER STATS
FASTEST: 66 ms	REGION: VIRGINIA	AVG. HITS: 903 /sec
SLOWEST: 137 ms	DURATION: 60 seconds	DATA TRANSFERED:
AVERAGE: 77 ms	LOAD: 1-2000 users	533.41мв

HITS 99.95% (54152) ERRORS 0.05% (26) TIMEOUTS 0.00% (1)

HITS

This rush generated **54,152** successful hits. The number of hits includes all the responses listed below. For example, if you only want **HTTP 200 OK** responses to count as Hits, then you can specify **--status 200** in your rush.

CODE	TYPE	DESCRIPTION	AMOUNT
200	HTTP	ОК	54152

HTTP 200 OK 100% (54152)

ERRORS

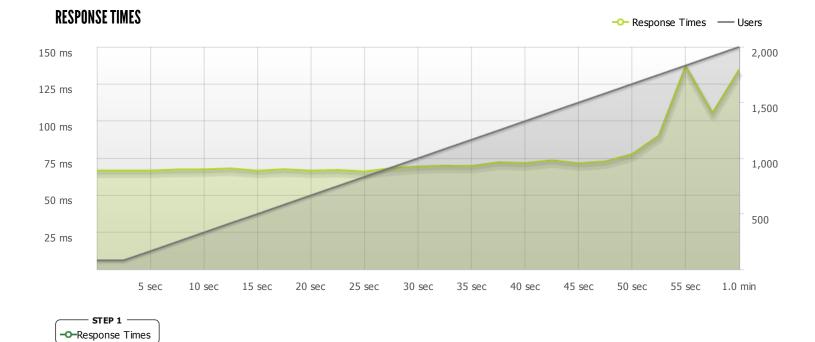

The first error happened at **22.5 seconds** into the test when the number of concurrent users was at **748**. Errors are usually caused by resource exhaustion issues, like running out of file descriptors or the connection pool size being too small (for SQL databases).

CODE	TYPE	DESCRIPTION	AMOUNT
23	ТСР	Connection timeout	26

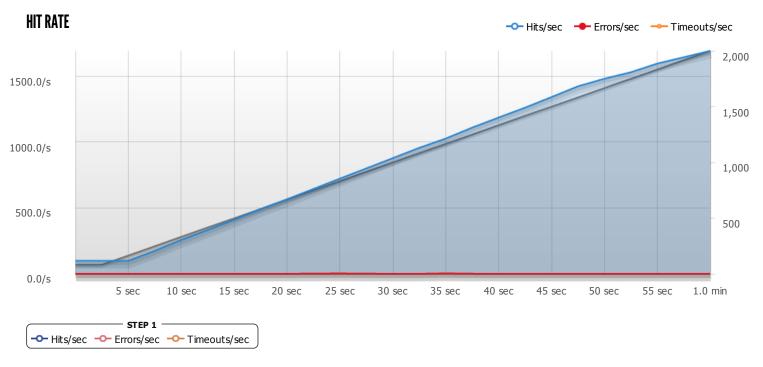

TIMEOUTS

The first timeout happened at **52.5 seconds** into the test when the number of concurrent users was at **1749**. Looks like you've been rushing with a timeout of **1000 ms**. Timeouts tend to increase with concurrency if you have lock contention of sorts. You might want to think about in-memory caching using redis, memcached or varnish to return stale data for a period of time and asynchronously refresh this data.

The max response time was: 136 ms @ 1832 users

The max hit rate was: 1,694 hits per second
